

...INNOVATING FOR  
YESTERDAY, TODAY,  
AND TOMORROW...

*Gary Loomis*

North Fork Composites is GARY LOOMIS' NEXT GENERATION of tubular composites and rod products. Known for QUALITY and CRAFTSMANSHIP Gary's forward thinking is the building block of North Fork Composites (NFC), making them one of THE LEADING INNOVATORS of "Made in the USA" fishing rod products. Combining his selection of the highest quality of NEXGEN materials LMX and over four decades as an innovator in tubular composites and machining, NFC is changing the industry one item at a time. Be it the most structurally sound, lightweight blanks, to graphite reel seats or hand crafted carbon-fiber handles, Gary Loomis and his vibrant, hand-picked team refuse to enter a product into the market place if it does not improve upon something that already exists. That means EXCELLENCE in every NFC product.

Founded to deliver carbon-fiber tubing for the sporting goods industry (Fishing Rods, Golf Shafts, Arrows, Oar Shafts), NFC continues to be a PIONEER IN TECHNOLOGY AND MANUFACTURING TECHNIQUES. NFC brings nearly 80 years of composite manufacturing experience. We believe the "IMPOSSIBLE IS POSSIBLE" and bring that vision to life through our staff and our products.

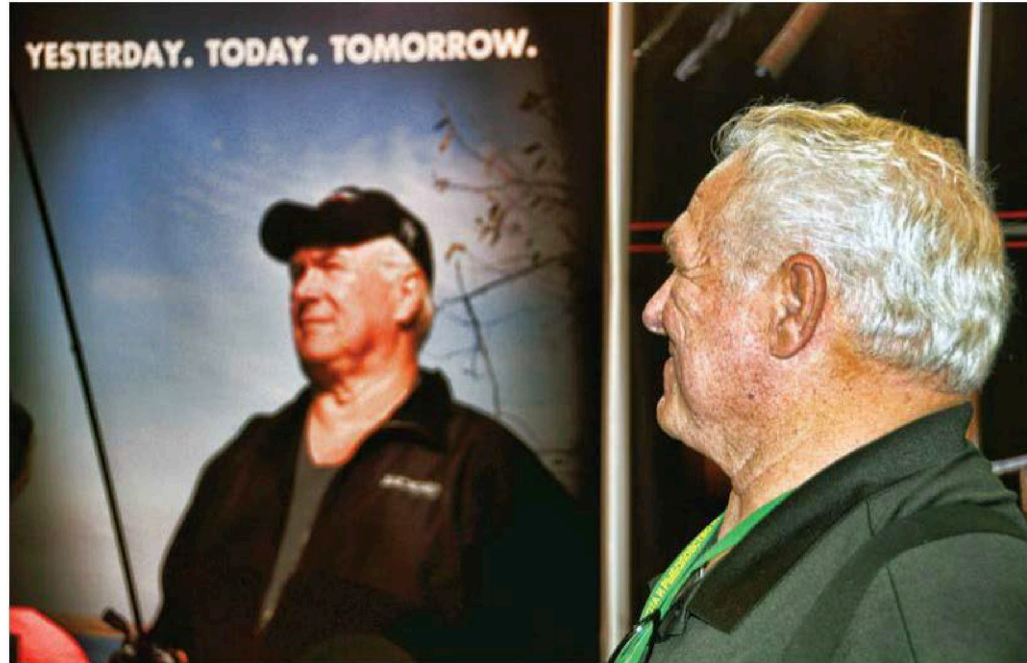

The balance of PERFORMANCE, DURABILITY, and WEIGHT are CRUCIAL when designing fishing rods. These deciding factors have successfully enabled NFC to become a trusted partner in composites manufacturing. As a result, our products transcend multiple industries and are used by large companies like Boeing, Google, and our United States Military. We are proud that thousands of customers put their trust in our products every day and contribute with their PASSION!

## TECHNOLOGY OVERVIEW

Throughout the last forty years, Gary Loomis has subscribed to one simple formula: “Weight is a deterrent to performance.” From the beginning, he incorporated the NEXGEN formula of material and manufacturing technology to make blanks and rods at NFC. Our NEXGEN machinery is designed and manufactured by Gary Loomis, which allows NFC to roll parts at hundreds of PSI above industry standard! This process combined with the latest NEXGEN LMX graphite technology, LMX results in parts that are sought after by the finest fisherman, the tech sector, and our government.

For many years, rod performance was solely focused on modulus, and Gary Loomis is partially to blame. In his never-ending quest for the next development in composites, he introduced previous models in higher modulus material. His competition would try to replicate Gary Loomis products with their own version of “high modulus.” However, modulus rating is truly only one part of the puzzle. The type of carbon-fiber material, resin content and systems, each effect the flex, weight, and performance of a rod blank. It is for these reasons that NFC has made the decision to change the dialog about materials and the tools we craft. Hand-selecting supreme materials for the proper application and Gary’s design genius, allows NFC to create and build the proper blank for the proper job.

NFC is removing the notion that one cutting-edge material is superior to another, because comparing materials can be like comparing apples to oranges. Each is special and unique qualities that aid in different benefits - such as recovery, durability, and lightness. Simply put, we select the proper material or materials for the specific design for the specific job. Materials are one building block. For the given tool and task, NFC’s manufacturing philosophy: NEXGEN Materials LMX, NEXGEN Machinery, NEXGEN Manufacturing, and NEXGEN Design create the finest made in the USA tubular composite products on the market. All are dependent on one another and support the goal of making a performance fishing rod blanks. We take pride in handcrafting all of our blanks in Washington, USA by artisans with over 80 years combined in manufacturing experience.

# NORTH FORK COMPOSITES

by *Gary Loomis*

## HAND CRAFTED IN THE USA

"I have always said that I am not the best fisherman in the world, but good enough to fish with the best and to design a blank that will help them catch more fish. In designing a rod blank, I listen to the fisherman's wants and needs when it comes to rod blank performance. After information is gathered, the deciding factor is asking one simple question: what do you really want the rod blank to do? Will this rod blank be used with heavy line pulling from deep depths for Tuna? Or are you fishing top water for fish that are jumping and peeling line off your reel like Dorado or Tarpon? Once the questions are answered, I have the beginning design idea for the blank. The industry has been infatuated with modulus, mostly focusing on higher inflated numbers. In some cases, this is good. As long as the design and manufacturing of the high modulus blank work together. In most cases I have felt that the perfect material needs to match the design and performance of a specific rod blank and the way it will be fished. The design of each blank and the intended use determines the material for the blank. Whether it is a blend of modulus materials or one modulus material, the performance is of the utmost." - GARY LOOMIS

# PASSION

There is only one good reason for us to make incredible blanks - so that you can make incredible rods for incredible fishing experiences. Year after year, we push the boundaries of technology, design, and manufacturing. Gary Loomis has always made products that are disruptive and that is what we continue to do and be - disrupters. **Your passionate fire for the sport is what drives you. Our passion is to ignite that fire within you.** Gary has stated, on occasion, that he can design a rod that would never break; but no one would want to fish with a lead pipe! NFC works endlessly with production and engineering staff to ensure that the best blank is made without compromising on performance. The only route that Gary Loomis and his team approves.

This is the NFC way.

## NEXGEN

What is NEXGEN? NEXGEN is Gary Loomis evolving the latest and greatest Materials, Machinery, Manufacturing, and Designs. Gary Loomis has redefined the materials and improved the overall construction in order to meet the high demands of today's requirements for modernized blanks for the modern angler. Included in the process was the updating of each blank design for the fisherman who demands the best, including durability to last.

### DESIGNS:

Gary Loomis has the latest innovation of NEXGEN designs! These new designs are updates from Gary's previous tried and true models that continue to stand the test of time.

### FEATURES:

**Paper Carbon Scrim:** This not only amplifies sensitivity, but it also reduces weight. By integrating carbon in the scrim rather than fiberglass, sensitivity is magnified creating the ultimate "feel it" experience. You will sense the fish even with the slightest movement on the end of your lure.

**Cross Ply:** Material design layups and material positioning are key in building a better blank which is why Gary Loomis and his proprietary, refreshed designs are what make his USA made rods true standouts.

**NFC's NEXGEN blanks are the future of USA rod blanks.**

### MACHINERY, MANUFACTURING AND PROCESSING:

NFC understands that the proprietary processing is the key to success. Gary Loomis hand crafts each machine to his specific designations and designs, in order to hand-construct the finest fishing blank. These machine designs, rolling pressurizers and assembly processes are what separates these USA made blanks for our competitors. Experience and knowledge are the pathways to success.

### FEATURES:

**High Pressure S-Rolling:** NFC designs and manufactures under a proprietary High Pressure S-Rolling process that is exclusively designed by Gary Loomis.

**Custom Cello Tape Tensioning:** Seamless wrapping and tensioning over the rod blank is key. Updated machine processing squeezes nearly all of the air out of the rod blank which is required in achieving the highest quality rod.

# MATERIALS & TECHNOLOGY

Our blanks have a soul! Why? NEXGEN LMX materials allow for the best possible blanks. All of our materials have gone through a vigorous update. North Fork Composites constantly strives for the ultimate performance, so it is imperative that all of our materials move through the collective team of experienced personnel. This proficiency has been proven through the production of thousands of blanks and several decades. Materials are kept in climate-controlled environments making every process integral to the success of the overall product. Whether it's an exclusive unidirectional carbon veil or machinery designed and assembled by Gary Loomis, rest assured that you are getting NFC's best. One would say that we are obsessive in making sure that only the best have the NFC stamp of approval.

Our LMX Xray (Initially called HM Xray in our R&D lab. HM because it's the highest modulus currently available that can be used in the fishing industry, and X-ray because our testers kept telling our engineers that they could sense the slightest vibration under water, so they could see and anticipate what one normally would not). Simply put, blanks made out of this material are the lightest, strongest blanks that we have ever manufactured. X-ray is 20% lighter than our current HM (which is already insanely light). The resin system is intended to stop "crack propagation" which is normally the issue with high modulus materials. In the case a blank is impacted and a micro fracture is created – the resin resists further cracking, extending the life of the blank. X-ray is completely scrim-less, with the hoop strength originating from a micro slitting of the fiber with another in the opposite direction. This allows the creating of an equal stiffness part, with 30% less material. X-ray blanks are un-sanded but have a natural matte finish as a result of the resin in the material.

Our LMX HM material is one of the lightest, most sensitive materials available in the industry today. It is a proprietary blend of USA Hexcel carbon-fiber with paper carbon scrim (PCS) that is sure to astound you. Most fiber pre-pregs have a glass scrim to keep the fibers together during the manufacturing process. Although glass scrim is a great binder, it does reduce sensitivity. Our HM material uses extremely thin sheets of chopped carbon to keep the fibers together, accomplishing the demands of manufacturing, but allowing for the increase in sensitivity due to lack of glass scrim in the pre-preg.

Our LMX-IM is often referred to as "high modulus" by other manufacturers. This durable yet sensitive Toray carbon-fiber was specifically developed for the fishing industry, with a focus of delivering a fiber that elongates better than what is designed for aerospace. It is intended to perform while under load (fish or hookset!). It is designed to stretch about 2% further than its counterparts, and in fiber speak it's a technological breakthrough. Combining resilience, sensitivity, a proprietary resin system to prevent cracks from developing and spreading – LMX IM is a preferred choice due to the perfect balance of weight, performance and durability.

North Fork Composites does not follow standards. We set them. Our SM is locally sourced in Washington, USA. Gary Loomis first started his research and testing of this carbon-fiber with Boeing scientists in the mid 1970's, and quickly discovered that not every fiber is right for a fishing rod. With an unparalleled advantage in depth of knowledge and partnership in the local aerospace industry, Toray was tasked to develop a "workhorse" fiber to perform in the harshest of environments and to withstand the high demands of the toughest fisheries such as Tuna, Salmon and oversized Sturgeon. The focus of our SM material is performance and durability, Gary has used it for decades, and it has become a favorite of fishing guides and sportfishermen alike.

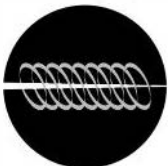

LMX – Delta – Signified by the triangle symbol, Delta combines three technologically advanced materials to form a hybrid material (and blank). By combining our SM, IM and Zentron (next generation high strain S2 glass) we have removed weight, and by optimizing material blends are able to offer a USA made blank at an affordable rate. This fiber blend has allowed us to minimize the brittle nature of carbon while maintaining the recovery and performance required in any fishing application. We choose to leave the blanks made out of this material un-sanded, giving the blanks a glossy look, the "ridges" left over from the resin further aid in protecting the fiber from any damage from accidental impact.

# TESTING

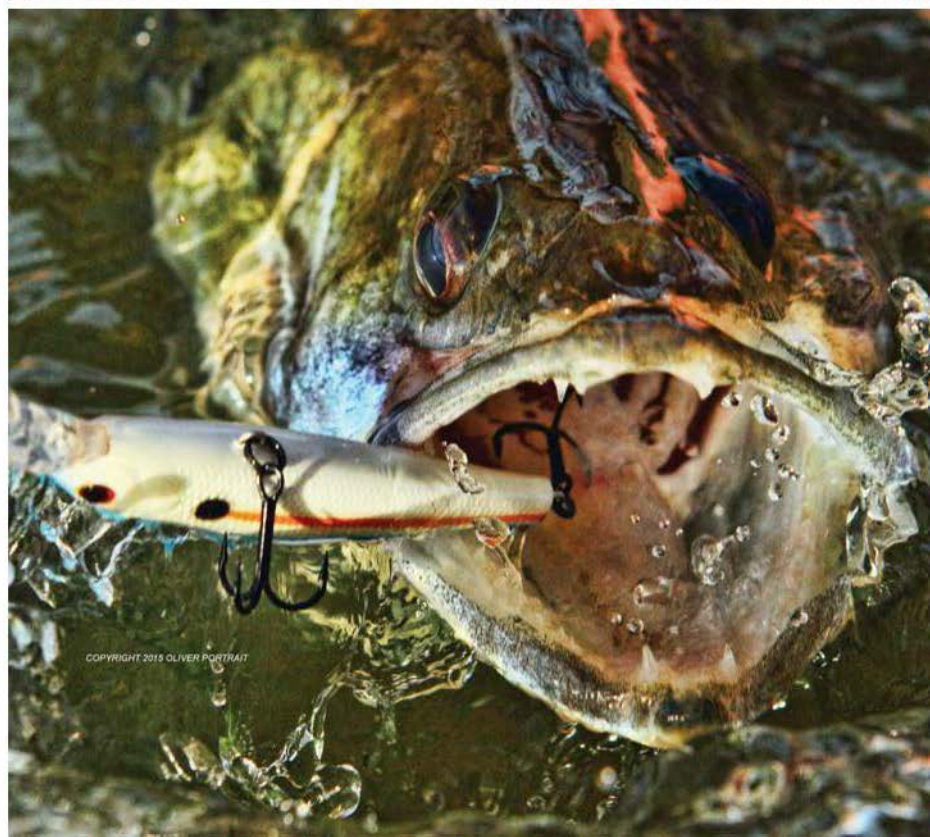

NFC's testing process is critical in our success and therefore begins with the arrival of every raw material shipment. The consistency of our raw materials, otherwise known as "pre-preg," is crucial. It is so critical that every batch of material must pass rigorous, high-standard testing, that Gary Loomis has maintained for more than 40 years, as a vital component for consistency. Through his direction, to ensure the highest quality of products, NFC's process involves breaking a percentage of our blanks within every batch and recording the results. These data points include a break test gauge documenting whether or not the pre-preg matches our stringent demands. The catalog compiles years of data, which allows us to update and compare our breaking standards against the previous years to find any discrepancies. Maintaining this extensive, accurate library of cataloged materials, including a section of every roll of Toray fiber, is just one of the many reasons we are so successful in maintaining our premium quality products. If any data or product does not test correctly, samples can be forwarded back to the supplier in order to fix the material. This is only one example of the strict protocols we follow to insure that our USA made blanks are built consistently, batch to batch and year after year.

# RESULTS

Controlling as many variables as possible in our rod building process is our secret to having a warranty program with a consistently low number of returns in comparison to industry standard return rates. Making the perfect blank means maintaining specific room temperature, tape tension, curing cycles, and many other crucial elements in our manufacturing. Details matter.

100% of our blanks are tested during different stages of our process. Batch testing our blanks that will become inventory allows you, as the customer, to receive the very best from NFC. We understand how unsettling it can be when a rod blank fails due to manufacturing defects. NFC makes every effort to single out any defects in blank production from start to finish.

As a result, NFC has received thousands of pictures of rods on blanks designed and built by Gary Loomis twenty years ago requesting nothing more than a cork touch-up after "modest use."

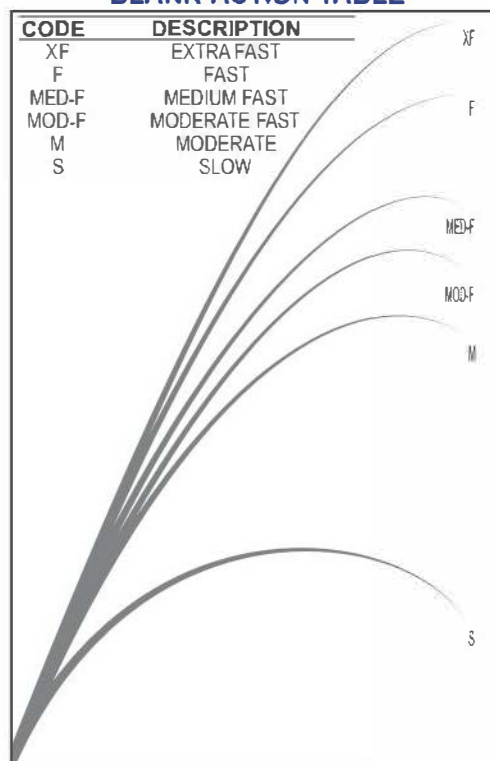

## ACTION

Action refers to the way a blank initially flexes under load. A fast action blank flexes more towards the tip, a moderate action blank flexes more into the mid-section, and a slow action blank flexes fully into the butt of the blank. Many blanks also fall into the “in-between” categories such as “moderate fast.” Understanding the actions of our blanks is vital in picking the right blank for the job at hand.

Please refer to the Blank Action Table shown (right) to correctly match your fishing technique to the best rod action.

If ever in doubt, please give us a call at 877-746-3343 and we would be happy to assist you in selecting the proper rod.

**BLANK ACTION TABLE**

## POWER

Power is measured by the backbone needed in the blank. The more effort it takes to bend a blank or a section of it, the more powerful it is. NFC power ratings are relative to our own blanks. Our power ratings within each category of spinning, casting, and saltwater rods are related to the other rods within each specific category. NFC uses both a description of power (example: Medium-Light) as well as a specific number (example: 3) for the power rating for each blank.

**BLANK POWER TABLE**

*Lmx*<sup>X-ray</sup>

## X-RAY ROD BLANKS

Our newest material HMx-ray is the latest edition to the NFC material family. HM because it's the highest modulus currently available, x-ray because just like an x-ray machine helps you see things you normally would not, you can feel the slightest vibration with these blanks. These are the lightest, strongest blanks that we have ever manufactured. HMx-ray is 20% lighter than our existing HM (which is already insanely light!) HMx-ray is more sensitive, and while we understand that "sensitivity" is subjective, it feels like you are receiving a shock through the arm, the ultimate aim is to allow you to "see" underwater. HMx-ray comes with in un-sanded, flat matte-black finish, almost pear-like. Sanding blanks makes them softer, the action of these blanks is crisp. The resin in these blanks is specifically developed for the fishing industry, and stops crack-propagation (even if you impact the blank and create a microfracture which would normally result in a failure down the road, this amazing resin resists to continuing to crack, extending the life of the blank. HMx-ray is a scrim-less material, hoop is obtained by a very fine fiber slit into the other. This construction with a high modulus fiber allows the creation of an equal stiffness part, with less material.

## BASS AND FRESHWATER ROD BLANKS

The HM-GEN2 rod blanks are the lightest, smoothest casting, and, we believe, are the most sensitive blanks manufactured in the U.S.A. Just how good are they? In some cases these blanks are up to 50% lighter than comparable rod blanks. Our extensive Pro Staff of professional guides, fishing publications and hardcore anglers alike agree that these blanks have no equal. Using HM-GEN2 as the engine for your rod, you can instantly feel the smoothness of the cast. When fishing for bass, or other freshwater species, we incorporate a progressive taper design for maximum cast-ability. In this series we have also integrated an ultra-fine diameter tip for easy loading at short distances. The paper carbon scrim (PCS) that delivers lightness and super strength. Finally the modulus design blends are added to further reduce the weight and increase the speed of recovery of these HM-GEN2 blanks.

## SALMON / STEELHEAD / SALTWATER ROD BLANKS

This lineup is exactly what you would expect from a company born and bred in the heart of Salmon and Steelhead country. Perfection. Our Pro-Staff and house staff catches more Salmon and Steelhead (per capita) than most rod companies. We would even be willing to wager that Gary Loomis has caught more Salmon and Steelhead than any rod company in the world. No matter what type of fishing you do, our years of experience will match your highest demands. When you require a super soft tip for salmon mooching, and enough lifting power in the butt section, our rod blanks in this series will give you rock star confidence. You will feel everything as the bait is being swallowed. This is pure energy transfer from the hook to your adrenaline.

### Steelhead

## *Lmx*<sup>IM</sup> BASS AND FRESHWATER ROD BLANKS

When Gary introduced the original design long ago, it created a fury in the industry. Our IM-GEN2 has evolved from the original design and has started yet again, uproar. The IM-GEN2 graphite brand is able to insight a "snapshot" of what the lure is doing every inch of your retrieve. Every bump, rock, weed, and strike is transferred directly into your hands. Even the most subtle movement will feel like your bait is being sucked into a jet engine! Distance is another key factor to these rod blanks. They are designed for thousands of casts without a hangover for your arm in the morning. Accuracy is singled out. NFC's IM-GEN2 rod blank tips are designed to resist side to side torque. These blanks show no mercy when setting the hook or flippin' a fish into the boat. You will feel in control from the hook set to the victorious end.

## *Lmx*<sup>IM</sup> SALMON / STEELHEAD ROD BLANKS

These are the go to Salmon and Steelhead rod blanks for personal use from our guides and pro-staff. The selection of IM-GEN2 Salmon/Steelhead blanks are perfect for providing the best overall experience to any customer seeking rugged performance combined with sensitivity. These blanks draw from the reactivity of our HM-GEN2 material, while incorporating the ruggedness of our SM. As for feel, it does not matter if you plunk, drift fish from shore, or use a boat, knowing what is happening on end of the line is crucial. These blanks have a light and receptive tip applicable for each style of fishing. Unmatched balance of performance and sensitivity with no trade-offs, these blanks are set to impress.

## *Lmx*<sup>SM</sup> BASS AND FRESHWATER ROD BLANKS

You are an avid fisherman seeking a blank that will enhance your fishing experience, yet last for years of use. Meet our SM-GEN2 material. Anything but standard, this aerospace grade fiber with a proprietary resin system is made to perform in the harshest of environments. Other manufacturers may claim to have rod blanks as tough as our SM-GEN2, but none are as light and responsive. The NFC SM-GEN2 rod blank is class leading while retaining lightness and are responsive by design. By incorporating GEN2, you will experience less fatigue at the end of the day. This will increase casting range, and control for better accuracy. These rods are undoubtedly the best performance value on the market.

### Mag Bass

## *Lmx*<sup>SM</sup> SALMON / STEELHEAD / SALTWATER / SURF ROD BLANKS

Our Salmon, Steelhead and Saltwater blanks in standard modulus SM-GEN2 graphite were designed for anyone who wants a great-performing, smooth casting blank, at an affordable price. Light, forgiving and strong, these rod blanks are perfect for your first step into high performance fishing. These are NFC's pride and joy and often take first place when you want additional reassurance. With the SM-GEN2, NFC plans for every fishing scenario. You, as the customer, plan to hang one pound of lead in a fast current water on a rod that has a sensitive tip for salmon mooching, we know what is required in any fishing environment.

## BASS / ICE AND FRESHWATER ROD BLANKS

Ever committed to advancing our mantra "weight is a deterrent to performance," North Fork Composites has done it again: Lighter. Stronger. Flex. Enter LMX-DELTA. Made up of the perfect trifecta of materials, the next pivot in action and performance has arrived. DELTA combines three technologically advanced materials to make one hybrid of graphite and glass, forming seamless junctions between materials minimizing interlaminar shear and adding flex. By combining our carbon-fi-ber LMX-PSI and LMX-LAMBDA with Zentron, an advance in S-2 fiberglass and an exclusive to NFC, naturally, some of the brittle nature of graphite is removed, adding the smooth flexibility of glass. Remarkably, the recovery of Zentron is nearly identical to graphite. DELTA simultaneously removes weight while adding strength, making this a destined combination. Designed lightweight and strong, specifically developed for aerospace to withstand impact at high velocity, its durability, strength and dramatic stiffness add a whole new dimension to rod blanks. Think Helicopter blades and Stealth Aircraft meet NFC precision fishing tools. NFC is now building lighter blanks with increased muscle and grace with LMX-DELTA. Change has come. Again.

## FLY ROD BLANKS

We speak Fly Fishing! In fact, one achievement for which Gary was inducted into the IGFA Hall of Fame was for his groundbreaking work with IMX and GLX Fly Rods which very quickly achieved worldwide recognition for some of the finest rods made. Our fly blank selection is designed to encompass classic techniques as well as the most recent developments in fly. Our blanks are designed for accuracy and castability. We put special attention on controlling torque, and quick recovery, which helps to keep the loops nice and tight during the cast

- Our Classic Series IM blanks (both two and four piece) are more moderate-fast, hand sanded, and available from a 4wt to an 8wt, these blanks will remind you of the classic Gary Loomis actions and are perfect for both fresh and saltwater applications.

-If you are looking for a fast action blank made with the latest generation materials look no further than the Gamma Alpha (ΓΑ) and Gamma Beta (Γβ). These blanks feature a multi modulus construction and are some of the lightest, toughest, blanks that we have designed. ΓΑ are faster than the classic series, and perfect for conditions where a little more wind or distance is required out of a cast. Γβ is an extra fast fly blank, designed for casting into the wind and for long distance casts. Both models are also hand sanded, slate gray in the natural carbon color.

## FEATURED HIGHLIGHTS

- U.S.A. Made
- Natural Flat Finish
- Limited Lifetime Warranty

## COLOR

GB, GA, F, CTF, SSF: Natural Flat Finish  
LMX: Matte Un-sanded Finish

-The LMX line of blanks was developed as a fast action four piece line across all fly segments. It is our most expansive lineup covering Spey/Switch/Czech nymphing techniques. Accuracy and durability is the focus of the LMX line, and their fast action allows the angler to 'go the distance' when required.

## ICONOGLASS FLY ROD BLANKS

At NFC we wanted to dispel the notion of what a glass blank should look and feel like. For years, custom rod builders have been asking our design team to give them a glass canvas, one that's a joy to cast, is lightweight and faster in action compared to traditional E and S glass predecessors. We decided to go a step further and incorporate stunning colors into this series. The name Iconoglass "stuck" as we wanted to challenge the traditional understanding of "glass is boring" or "glass is heavy" or "glass is too slow". Iconoglass blanks will challenge this notion with every cast.

### Iconoglass

#### FEATURED HIGHLIGHTS

- Iconoglass Blanks are S2/Zentron Fiber
- Ferrule Lite Joints
- Gloss Raw Finish in Natural, Cyan, Green and Gray
- Unsanded - sanding a blank makes the action softer, not sanding the blanks makes the fast zentron action even faster
- U.S.A. Made
- Limited Lifetime Warranty

## SILVERBACK / PELAGIC / ORIGINAL GLASS ROD BLANKS

We are excited to announce an addition and expansion of our Saltwater line! The SilverBack blanks and Original Glass (OG) blanks!

- We are adding 15 new models to our Offshore Lineup for 2021!
- Jig Sticks (Glass and Hybrids) Live Bait Rods, Stand-Up Rods and many more!
- Original Glass (OG) blanks are made with Zentron and HS4 (High Strain 4) glass, which results in blanks that are 1/3 lighter than traditional E-Glass or S-Glass blanks
- Original Glass blanks are available in gloss black or gloss white
- Silverback blanks are a composite blank that are 50% lighter than comparable blanks (we are listing blank weights in the table below) and have a matte silver look

## NFC GRIPS – FIRST STRIKE / SOFT TOUCH

EFX - First we started with light weight sensitive foam that is made in a nitrogen rich environment which eliminates the nasty air pockets found in some foam products. Next, we lay a single ply of linear graphite prepreg in the zero direction (length wise) for added strength and better adhesion between the foam and outer sleeve. We then pull the seamless woven carbon resin impregnated sleeve over the entire grip and oven cure the grip. By using our custom proprietary RESIN IMPREGNATED prepreg, we eliminate the nasty, messy step of having to resin coat your part while making it. By oven curing the grip, the resulting strength is off the charts! The result is an incredibly light and strong grip that has the sensitivity from another planet. They are easy to ream, will not absorb water and are UV stable.

Soft Touch - We wanted to challenge the traditional carbon fiber tubes that are being used as grips. Hundreds of designs tested to achieve an ergonomic shape comfortable for all day fishing. Next we tackled the most common objection of carbon grips feeling too cold or slippery. We added soft touch technology to the grip to make it grip. This also adds a “matte” look to our grips. Incredibly light and sensitive, but resilient and durable. EFX Soft touch grips are the next stage in the evolution of carbon grips! Use tape or an arbor to glue them in place. Grips will fit any size 16 and 17 reel-seat) Fuji, Seaguide, ALPS, PacBay.
