

CCS - UNIVERSAL ROD RATING SYSTEM

CONVERSION CHART - INTRINSIC POWER IN CENTS*, GRAMS, AND GRAINS TO ERN, TP, AND PR

Chart version: 1.0 - Design Copyright © 2010 North Fork Composites.

*Cent values are based on cents minted in the U.S. after 2000, and weighing 2.5 grams each.

This chart is intended to provide a graphical representation of the ERN, TP and PR values as defined by Dr. Bill Hanneman's Common Cents System (CCS). North Fork has taken care to provide accurate values (within reasonable resolution), but encourages all rod builders to double-check their data. North Fork will publish updated charts in the case of error or other alterations of CCS values.
